

Intelligent prior authorization:

Breakthrough prior authorization barriers

Surescripts Intelligent Prior Authorization Platform for Life Sciences helps:

Accelerate speed to therapy:

- Reduce determination time from industry average of 3 days to under 22 seconds²

Enhance the patient experience:

- Minimizes hurdles, lessens confusion and improves medication adherence—building confidence in treatment plans

Deliver accurate data-driven insights:

- Benefit from comprehensive reporting on prior authorization analytics, including:
 - Transactions
 - Rejection codes
 - Drop-off rates
 - Question sets
 - More

Accelerate patient access to innovative therapies with automation and actionable insights.

Life sciences companies spend \$1B annually¹ on eligibility and prior authorization services. Despite these investments, patient access to breakthrough treatments can be delayed by manual processes, like fax/phone-based or single-vendor pharmacy portals.

These barriers combined with the struggle to track whether groundbreaking medications are reaching patients safely and effectively, can limit the reach of your innovative pharmaceuticals.

Surescripts Intelligent Prior Authorization Platform for Life Sciences automates prior authorization within the prescriber's workflow. Unlike manual processes, our platform integrates tools, data and insights that inform and accelerate decisions, helping keep patient care on track.

When you partner with Surescripts, our Intelligent Prior Authorization Platform for Life Sciences:

- Reviews every prescription in our network
- Triggers prior authorization before the prescription leaves the prescriber's system
- Leverages clinical chart data to answer question sets automatically within the provider's workflow
- Operates across the largest PBM network in the industry
- Delivers de-identified prior authorization insights for brand and patient access strategy teams
- Inform patient access strategies and optimize commercial performance

With Surescripts, life science companies gain a powerful solution that helps cut determination time, eliminate delays, and deliver actionable insights that validate and improve performance.
